Officer/Employee Name:	Date of incident:
Location of incident:	Time:

As a result, the model is able to capture the complex relationships between the variables and provide a more accurate prediction of the outcome. The model is trained on a dataset of historical data, and the results are compared against the actual outcome to evaluate the model's performance. The model is then used to predict the outcome for a given set of input variables, and the results are compared against the actual outcome to evaluate the model's performance. The model is then used to predict the outcome for a given set of input variables, and the results are compared against the actual outcome to evaluate the model's performance.
